#### **DETAILED ACTION**

# **Drawings**

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the features reciting in claims 4, 10-12 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### Specification

The abstract of the disclosure is objected to because it not clearly states which is new in the art to which the invention pertains as claimed. Correction is required. See MPEP § 608.01(b).

The specification is objected to as failing to provide sufficient support of how to make the liquid crystal Fabry-Perot etalon recited in claim 4 regarding the first transparent conductor layer and the second transparent conductor layer are each etched so as to form multiple independent etalons. According to the specification (p. 22, lines 5-9), there is only <u>one</u> conductive layer that being etched.

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter recited in claim 11. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o).

Regarding claim 11, the recitation calling for "the second transparent conductor layer is coated on the second substrate."

## Claim Objections

Claims 4-12 are objected to because it is unclear how the first and second substrate is connected to each other. Appropriate correction is required.

# **Double Patenting**

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA

Application/Control Number: 09/775,970

Art Unit: 2871

1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 4, 5 and 12 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 10 of copending Application No. 10/404,417. Although the conflicting claims are not identical, they are not patentably distinct from each other because they recited similar limitations.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 6271899 B1 discloses a tunable nano-phase polymer dispersed liquid crystal filter comprising a Fabry-Perot etalon structures, as in figs. 5 and 7, wherein the dielectric layers are shifted from inside to the outside of the HL-multilayer stack.

US 5168383 A discloses a liquid crystal device with a pair of dielectric multilayer film mirror constitute a Fabry-Perot etalon via the liquid crystal layer and enhance a contrast ratio.

US 5150236 A disclose a tunable liquid crystal etalon filter comprising two dielectric stack mirrors defining an optical cavity into which is filled a liquid crystal.

Art Unit: 2871

US 5111321 A disclose a dual-polarization liquid-crystal etalon filter in which a Fabry-Perot cavity is set up between two end reflectors, preferably interference mirrors.

#### Contact Information

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Julie-Huyen L. Ngo whose telephone number is (571) 272-2295. The Examiner can normally be reached on T-Friday.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's Supervisor, Mr. Robert H. Kim can be reached at (571) 272-2293.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (571) 272-1562.
